## 1. Science

## Solar \& Space weather events

The level of solar activity ${ }^{1}$ this week. Only M- and X-flares are mentioned, the most energetic one(s) are presented in bold:

|  | Monday <br> 06 May | Tuesday <br> 07 May | Wednesday <br> 08 May | Thursday <br> 09 May | Friday <br> 10 May | Saturday <br> 11 May | Sunday <br> 12 May |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Activity | low | low | low | low | moderate | low | moderate |
| Flares | - | - | - | - | M3.9 @ 00:44 <br> M1.3 @ 12:37 | - | M1.9 @ 20:17 <br> M1.2 @ 22:37 |

[^0]The SWAP images of May 06 and May 12 are shown below, with annotated active regions.

http://sidc.be/html/CmapPage.html

## Solar Activity

Solar (flaring) was about at the same level as last week: again with (quite) some C-level flaring every day, with activity increasing towards the end of the week, including 4 M -flares in the last 3 days.

In order to view the activity of this week in more detail, we suggest going to the following website from which all the daily (normal and difference) movies can be accessed: $\mathrm{http}: / / \mathrm{proba2} .0 \mathrm{ma}$.be/ssa. This page also lists the recorded flaring events.

A weekly overview movie can be found here (SWAP174/AIA304 combination; HelioViewer.org). Note the occurrence of a number of eclipses in the night of Thursday 9th to Friday 10th.

Details about some of this week's events can be found further below..

Tuesday 07th:

Thursday 09th:
Two events:

1. prominence eruption: during a large part of the day, activity along the SW limb can be seen, until the prominence erupts (see also the start of the next movie)
2. eclipses: 3 eclipses can be seen, one of which grazes the solar surface. The three eclipses are preceded by a big prominence eruption on the South West limb (see end of the previous movie).

Friday 10th:

M3.9 flare behind the East limb @ 01:05-SWAP difference image

## PROBA2/SWAP 174, 2013-05-10T16,4 414195

C2.5 flare in the North West quadrant @ 16:41 - SWAP difference image

Saturday 11th:

Filament eruption in the North West quadrant @ 23:27-SWAP difference image
Find a movie of this event here (SWAP174 \& SDO AIA 304 composite)

C8.6 flare eruption on the South East limb @ 19:46 - SWAP difference image

An overview of the weekly LYRA \& SWAP data is provided below:
The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (solar intensity derived from 'integrated’ SWAP images)

The blue shaded periods correspond to, from left to right:

- SWAP calibration on Tuesday
- SWAP data gap on Wednesday
- ESP experiment on Thursday
- Eclipse campaign Thursday and Friday, including a SWAP data gap.

The orange shaded periods correspond to, from left to right:

- LYRA calibration

The red shaded period corresponds to:

- None

## Outreach, papers, presentations, etc.

Please consult http://proba2.oma.be/science/publications for a list of interesting articles using SWAP \& LYRA data, as well as a link to the complete article list.

The Solar Physics topical issue on the Proba 2 solar instruments SWAP \& LYRA was issued: http://rd.springer.com/journal/11207/286/1/page/1
"Oscillatory behavior in the corona"; Calabro et al., Solar Physics, Volume 286, Issue 2, pp.405-415 http://adsabs.harvard.edu/abs/2013SoPh..286..405C
"Temperature Response of the $171 \AA$ Passband of the SWAP Imager on PROBA2, with a Comparison to TRACE, SOHO, STEREO, and SDO"; Raftery et al.; Solar Physics, Volume 286, Issue 1, pp.111124; http://adsabs.harvard.edu/doi/10.1007/s11207-013-0266-z

## Guest Investigator Program

- None

## 2. LYRA instrument status

## Calibration

Bi-weekly LYRA calibration campaign on Wednesday 8th.
IOS \& operations

| Monday 06 May | Tuesday 07 May | Wednesday 08 May | Thursday 09 May | Friday 10 May | Saturday <br> 11 May | Sunday 12 May |

The following science campaigns were performed by LYRA:

- daily U3 observations campaign

## LYRA detector temperature

LYRA detector 2 temperature globally varied between 46.3 and 47.5 degrees $C$, taking into account the daily U3 activation periods; the latter result in a temperature increase of about 0.6 degrees C . During calibration on Wednesday, temperature dropped to 45.5 degrees; during the eclipse campaign to 45.8 degrees.

## To be explored

- None

## 3. SWAP instrument status

## Calibration

Bi-weekly SWAP calibration campaign on Tuesday 7th.

## MCPM errors

The number of MCPM recoverable errors increased from 7580 to 7659.

The number of MCPM unrecoverable errors remained at 1127.

## IOS \& operations

| Monday <br> 06 May | Tuesday 07 <br> May | Wednesday <br> 08 May | Thursday <br> 09 May | Friday <br> 10 May | Saturday <br> 11 May | Sunday <br> 12 May |

Special operations for SWAP, this week:

- ESP jump on Thursday
- Specific observations for the eclipse campaign during the night of May 09 and 10.

## SWAP detector temperature

The SWAP Cold Finger Temperature, globally varied between -1.45 and -0.58 degrees C. During the eclipse campaign in the night of Thu 09 to Fri 10th, temperature dropped to -1.60 degrees.

## To be explored

- None.

## 4. PROBA2 Science Center Status

The main operator is Koen Stegen.

The following changes were made to the P2SC:

- None.

## 5. Data reception \& discussions with MOC

## Passes

The delivery of the passes for this week (passes 10943 to 10998) was nominal, except for:

- Passes 10972 and 10974. Some data was recuperated at a later stage.

## Data coverage HK

All HK data files (LYRA_AD) have been received, except for:

- LYRA_AD_10972.

About 2 hours of HK data was lost on May 7th, due to the launch of Proba V. The length between 2 consecutive Proba 2 passes that day exceeded 10 hours (and thereby surpassed the on-board storage capacity for HK).
Some HK data was lost during the eclipse campaign (pass 10972).

## Data coverage SWAP

All SWAP Science data files (BINSWAP) have been received, except for:

- BINSWAP_10972 and 10974.

About 2 hours of SWAP data was lost due to the loss of HK data on the day of Proba V launch (May $7 \mathrm{th})$.

Total number of images between 2013 May 06 OUT and 2013 May 13 OUT: 3669
Highest cadence in this period: 30 seconds
Average cadence in this period: 164.83 seconds
Number of image gaps larger than 300 seconds: 107
Largest data gap: 54.17 minutes

## Data coverage LYRA

All LYRA Science data files (BINLYRA) have been received, except for:

- BINLYRA_10972 and 10974. Data from pass 10974 was recuperated later on - in BINLYRA_10977.

## 7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.
The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
(+ extreme?)

[^0]:    ${ }^{1}$ See appendix. All timings are given in UT.
