Flares	-	-	-	-	-	M1.1	-

¹ See appendix. All timings are given in UT.

Solar Activity

Solar flare activity fluctuated from low to moderate during the week.

In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: <https://proba2.oma.be/ssa>

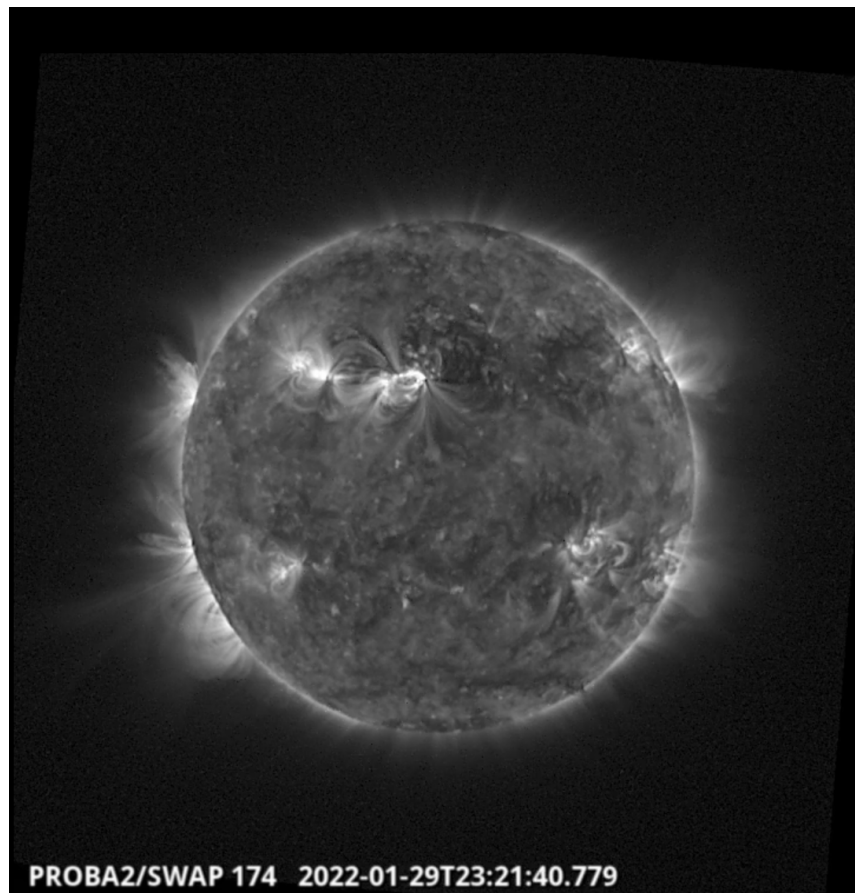

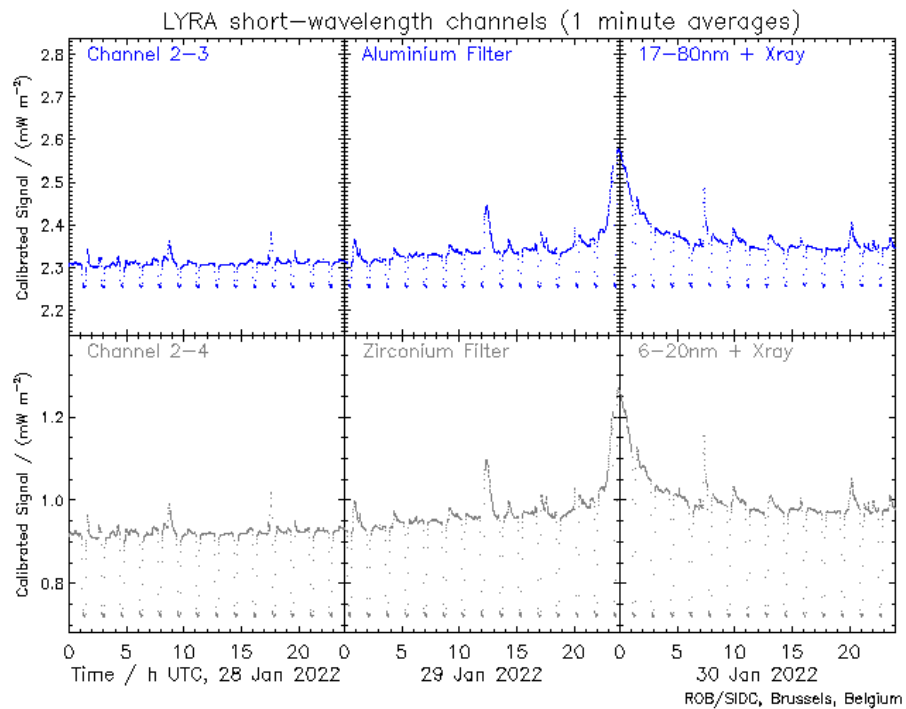

This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP week 618).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository [here](#)

Saturday Jan 29

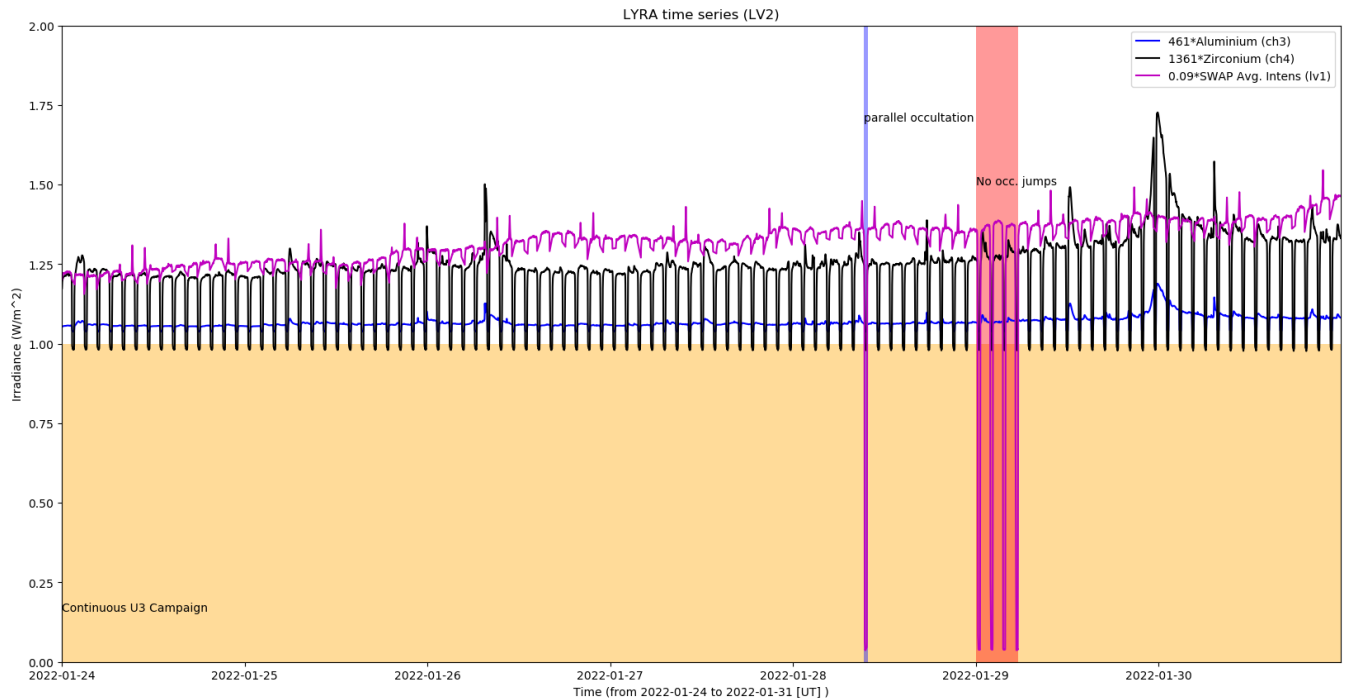

The largest flare of the week, an M1.1 flare, was observed by SWAP and LYRA. The flare is visible in the northern hemisphere on 2022-Jan-29, as shown in the SWAP image above taken at 23:21 UT.

Find a movie of the event [here](#) (SWAP movie)

An overview of the weekly LYRA & SWAP data is provided below:

The following curves are visible:

- black: Zirconium Channel LYRA Unit 2
- blue: Aluminium Channel of LYRA Unit 2
- purple: SWAVINT (SWAP Average Intensity; integrated solar intensity per SWAP image pixel)

Operations and Calibrations:

The blue shaded periods related to SWAP, correspond to, from left to right:

- SWAP and LYRA parallel occultation

The orange shaded periods related to LYRA correspond to, from left to right:

- Continuous U3 Campaign

The red shaded periods related to other issues corresponds to:

- No occultation jumps early on 2022-Jan-29 (IOS sent too late on the 28th)

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
