The level of solar activity¹ fluctuated between **low and moderate** this week.

Only M- and X-flares are mentioned, the most energetic one(s) per day are presented in **bold**:

	Monday 16 Jan	Tuesday 17 Jan	Wednesday 18 Jan	Thursday 19 Jan	Friday 20 Jan	Saturday 21 Jan	Sunday 22 Jan
Activity	low	moderate	moderate	moderate	low	low	moderate
Flares	-	M1.8	M1.8	M1.0, M1.7, M1.1	-	-	M1.6, M1.1

¹ See appendix. All timings are given in UT.

Solar Activity

Solar flare activity fluctuated from low to moderate during the week.

In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: <https://proba2.oma.be/ssa>

This page also lists the recorded flaring events.

A weekly overview movie can be found [here](#) (SWAP week 669).

Details about some of this week's events can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository [here](#)

Wednesday Jan 18

The largest flare of the week, a M1.8, has been produced around 10:36 UT by the active region NOAA 3190 located on the South-East part of the solar disk - SWAP image

Friday Jan 20

A long filament, located on the South-West part of the solar disk, erupted out into space around 11:38 UT. The eruption produced an impressive coronal mass ejection. - SWAP image

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:

- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
