Solar Activity

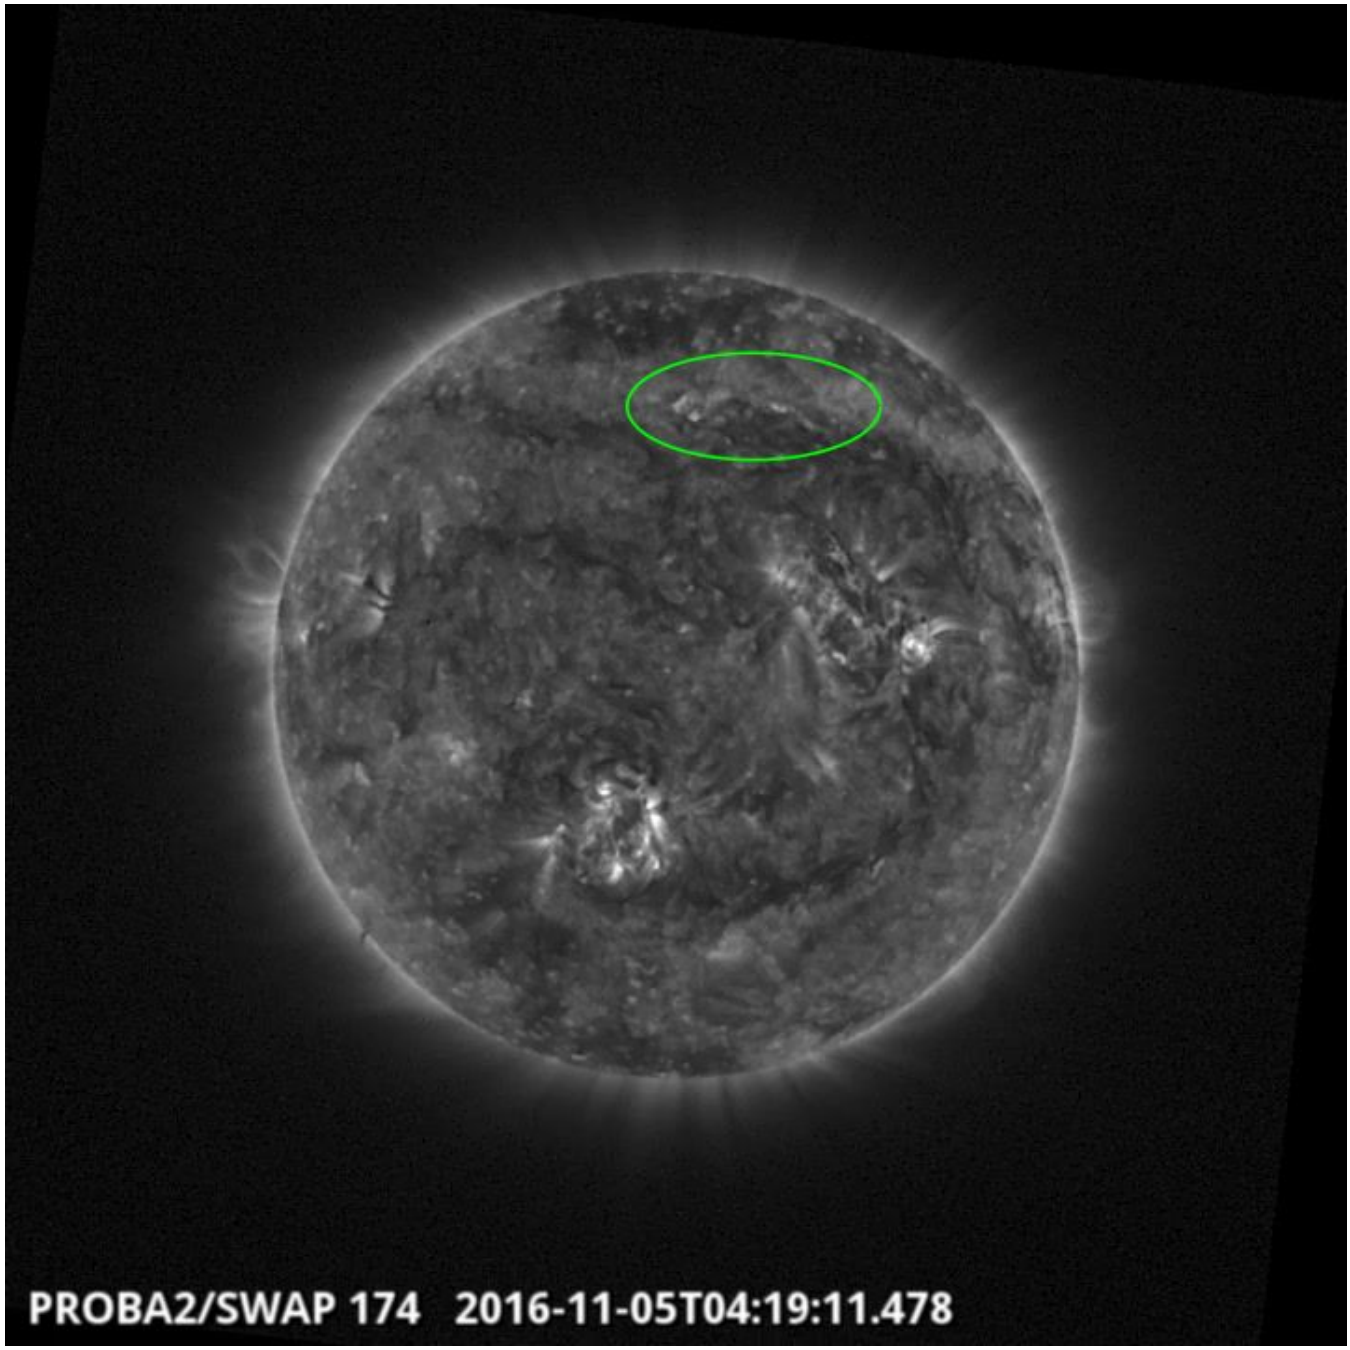
Solar flare activity remained very low during the week.
In order to view the activity of this week in more detail, we suggest to go to the following website from which all the daily (normal and difference) movies can be accessed: http://proba2.oma.be/ssa
This page also lists the recorded flaring events.

A weekly overview movie can be found here (SWAP week 345).

Details about some of this week's events, can be found further below.

If any of the linked movies are unavailable they can be found in the P2SC movie repository here

Saturday Nov 05



A flow and possible failed eruption was observed by SWAP in the north west quadrant of the Sun on 2016-Nov-05 at 04:19 UT

Find a movie of the event here (SWAP movie)

The blue shaded periods correspond to, from left to right:

- Bi-weekly SWAP calibration, 2016-Nov-01
- ESP jump, 2016-Nov-03
- SWAP occultation campaign, 2016-Nov-04

The orange shaded periods correspond to, from left to right:

- Daily unit 3 campaign, 2016-Oct-31
- Daily unit 3 campaign, 2016-Nov-01
- LYRA bi-weekly calibration campaign, 2016-Nov-02
- Daily unit 3 campaign, 2016-Nov-02
- Daily unit 3 campaign, 2016-Nov-03
- Daily unit 3 campaign, 2016-Nov-04
- Daily unit 3 campaign, 2016-Nov-05
- Daily unit 3 campaign, 2016-Nov-06

The red shaded period corresponds to:

- LYRA packets not received due to LYRA wrong checksum, the result is that the LYRA data is invalidated.

7. APPENDIX Solar Activity Definitions

In the science section we use the following solar activity standards.

The standard scale for solar activity is:
- very low (almost no flares, only B)
- low (a few C flares)
- moderate (many C flares and at least an M flare)
- high (several M flares and an X flare)
- very high (continuous background of C flares, numerous M flares, more than one X flare)
